

irritime

Pressed Fittings

Used in thin-walled drip lines. Highly safe and easy to use is extremely easy. Thanks to its design, it compresses and locks when pulled and never comes off. deadlock.

Applications :

- Irritime offers solutions for drip irrigation lines in different sizes. 16, 22, and 25mm flat drip used in irrigation pipes.
- It is used in thin-walled, low density polyethylene (LDPE) flat pipes (0.15-0.40 mm).

Areas of use :

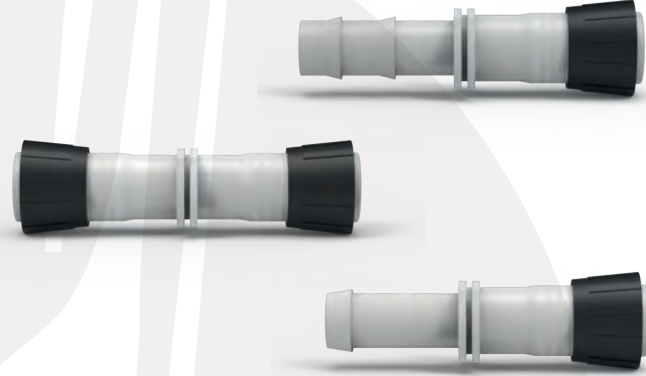

Landscape Sector, Agricultural Irrigation and Greenhouses.

Advantages :

- Extremely reliable.
- Resistant against impacts.
- High resistance to chemicals used in agriculture,
- Easy to assemble
- Resistant to UV rays
- Design to prevent leaks
- It does not allow algae and bacterial growth as it does not pass UV rays.
- Durable one-piece construction.
- Smooth inner surface to prevent pressure losses

Usage Information :

- Irritime pipe connection adapters should be kept away from hard and sharp objects during storage and installation. If the installation is to be laid under the ground, it should be covered with sand to protect it from hard and sharp objects. Never use damaged adapters.
- For maximum efficiency of Irritime pipe connection adapters, tees and elbows are 90°, other adapters 180° should be mounted on the pipe at an angle. Connections forming different angles may cause stresses on the adapter. will reduce the lifetime of the installation.
