## MINI VALVES

### Applications :

- Irritime offers solutions in different sizes for drip irrigation lines. It is used for 16, 20, 25 and 32 mm drip irrigation pipes.
- It allows you to control your irrigation system easily by opening and closing.

### Areas of Use :

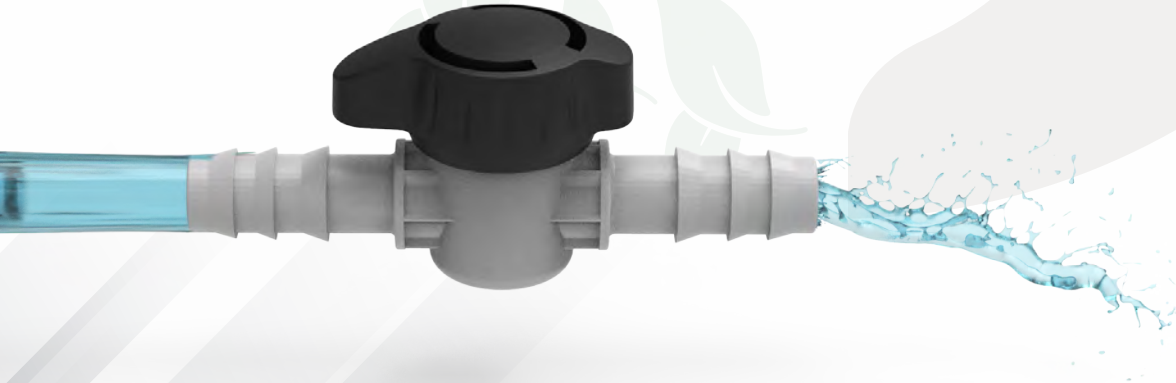

Landscape Sector, Agricultural Irrigation and Greenhouses.

### Advantages :

- Advantages :
- Made of impact resistant, high quality POM and polypropylene raw materials.
- Easy to assemble
- Resistant to UV rays
- Since it does not pass UV rays, it does not allow mossing and bacterial growth.
- Internal surfaces are homogeneous and non-porous.

### Usage Information :

- Irritime mini valves should be kept away from hard and sharp objects during storage and installation. Damaged adapters should never be used.
- In order to get maximum efficiency from Irritime pipe connection adapters, they should be attached to the pipe at a 180° angle. must be mounted. Since connections forming different angles will cause stresses on the mini valve the life of the installation will be reduced.
- Over tightening the nut during assembly causes additional stress on the adapter. In this way, an additional The product subjected to stress cannot be expected to meet the guaranteed pressure values. For this reason, it should be remembered that the product is plastic and should only be tightened with a force that will ensure tightness.
